11321-P012USD3 PATENT

AMENDMENTS TO THE CLAIMS

1-165. (Cancelled)

- 166. (Currently amended) A membrane comprising an array of <u>at least 10³</u> single-wall carbon nanotubes in a substantially parallel relationship, wherein the membrane is nanoporous and wherein the array is a substantially two-dimensional array.
- 167. (Previously presented) The membrane of claim 166 wherein the membrane is conductive.
- 168. (Currently amended) A membrane comprising: (a) an array of <u>at least 10³</u> single-wall carbon nanotubes in a substantially parallel relationship, wherein the membrane is nanoporous <u>and wherein the array is a substantially two-dimensional array</u>; and (b) at least one photoactive molecule attached to the membrane.
- 169. (Currently amended) A membrane comprising an array of <u>at least 10³</u> single-wall carbon nanotubes in a substantially parallel relationship, wherein (a) the membrane is nanoporous; (b) the array is a substantially two-dimensional array; and (c) at least one of the single-wall carbon nanotubes have ends that are derivatized with a photoactive dye molecule.

170-171. (Cancelled)

- 172. (Currently amended) A membrane comprising carbon fibers that are aggregates of a plurality of at least 10⁶ single-wall carbon nanotubes, wherein the plurality of single-wall carbon nanotubes are in a generally parallel orientation, and wherein the membrane is substantially two-dimensional.
- 173. (Previously presented) A membrane comprising: (a) carbon fibers that are aggregates of a plurality of single-wall carbon nanotubes, wherein the plurality of single-wall carbon

11321-P012USD3 PATENT

nanotubes are in generally parallel orientation; and (b) at least one dopant physically entrapped between the single-wall carbon nanotubes of the carbon fibers.

174. (Previously presented) The membrane of claim 173 wherein the dopant comprises a substance selected from the group consisting of metals, halogens, FeCl₃, and combinations thereof.

175-176. (Cancelled)

- 177. (Currently amended) A battery comprising a membrane, wherein the membrane comprises an array of at least 10³ single-wall carbon nanotubes in a substantially parallel relationship, wherein the array is a substantially two-dimensional array.
- 178. (Previously presented) The battery of claim 177 wherein the battery is a lithium ion battery.
- 179. (Currently amended) A battery comprising a membrane, wherein the membrane comprises carbon fibers that are aggregates of a plurality of at least 10⁶ single-wall carbon nanotubes, and wherein the plurality of single-wall carbon nanotubes are in a generally parallel orientation, and wherein the membrane is substantially two-dimensional.
- 180. (Previously presented) The battery of claim 179 wherein the battery is a lithium ion battery.

181-188. (Cancelled)

189. (New) The membrane of claim 173, wherein the plurality of single-wall carbon nanotubes is at least 10^6 single-wall carbon nanotubes and wherein the membrane is a substantially two-dimensional membrane.
